

**COVID-19:**  
**a catalyst for change in global  
engineering education:**

6<sup>th</sup> July 2022

Dr Ruth Graham

# Outline of presentation

- 1 Context: what was the state of the art in engineering education prior to March 2020?**

---
- 2 How will the systemic shock of COVID-19 impact the direction of travel for the engineering education sector?

**After many decades of discussion within the engineering education community, the report highlighted groundswell for change...**

*“the study feedback suggested that the engineering education sector is entering a period of rapid and fundamental change”*

## The 10 institutions most frequently identified as **current leaders** in engineering undergraduate education

1	Olin College (US)	6	UCL (UK)
2	MIT (US)	7	Purdue Uni (US)
3	Stanford Uni (US)	8	NUS (Singapore)
4	Aalborg Uni (Denmark)	9	Uni of Cambridge (UK)
5	TU Delft (Netherlands)	10	Chalmers Uni (Sweden)

## The 10 institutions most frequently identified as **emerging leaders** in engineering undergraduate education

1	SUTD (Singapore)	6	NUS (Singapore)
2	Olin College (US)	7	TU Delft (Netherlands)
3	UCL (UK)	8	Charles Sturt (Australia)
4	PUC (Chile)	9	Tsinghua (China)
5	Iron Range (US)	10	Arizona State (US)

## Distinguishing programmatic features of the emerging leaders

### CURRENT LEADERS

Largely US and Europe based

### EMERGING LEADERS

Global spread of institutions

## The locations of **current** and **emerging** leaders:

## Distinguishing programmatic features of the emerging leaders

### CURRENT LEADERS

Largely US and Europe based

**Non-traditional practice confined to  
'pockets' with course often taught in  
isolation**

### EMERGING LEADERS

Global spread of institutions

**Systemic/unified approach with  
connectivity across the curriculum**

## The 10 institutions most frequently identified as **emerging leaders** in engineering undergraduate education

1	SUTD (Singapore)	6	NUS (Singapore)
2	Olin College (US)	7	TU Delft (Netherlands)
3	UCL (UK)	8	Charles Sturt (Australia)
4	PUC (Chile)	9	Tsinghua (China)
5	Iron Range (US)	10	Arizona State (US)

## The 10 institutions most frequently identified as **emerging leaders** in engineering undergraduate education

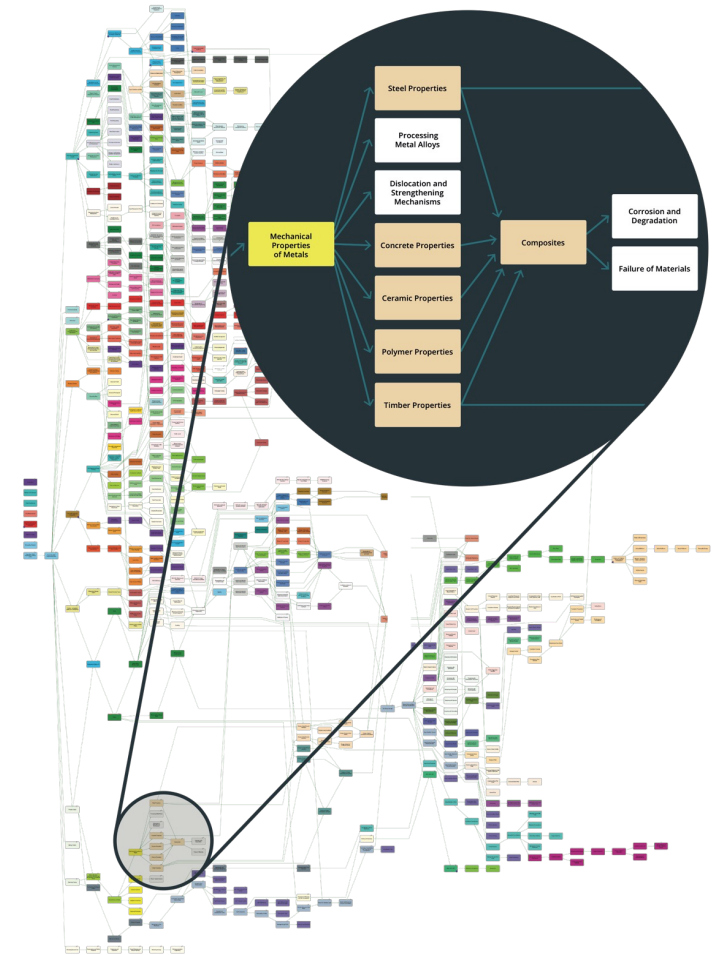

1	SUTD (Singapore)	
2	Olin College (US)	
3	UCL (UK)	
4	PUC (Chile)	
5	Iron Range (US)	
		8
		Charles Sturt (Australia)
		10
		Arizona State (US)

## Systemic/unified approach – CSU (Australia)

## CSU topic tree

- core engineering concepts and skills are disaggregated into discrete three-hour topics and accessed independently online by students
- the topic tree offers a visual map of the relationships and dependencies between topics and branches of engineering
- students complete 240 topics before their work placement and 600 topics by graduation

## Distinguishing programmatic features of the emerging leaders

### CURRENT LEADERS

Largely US and Europe based

Non-traditional practice confined to 'pockets' with course often taught in isolation

**Teacher-centred approach with limited external connectivity**

### EMERGING LEADERS

Global spread of institutions

Systemic/unified approach with connectivity across the curriculum

**Culture of student empowerment and cross-community collaboration**

## Distinguishing programmatic features of the emerging leaders

### CURRENT LEADERS

Largely US and Europe based

Non-traditional practice confined to 'pockets' with course often taught in isolation

Teacher-centred approach with limited external connectivity

**Development shaped by variety of drivers, with much of curriculum unchanged for decades**

### EMERGING LEADERS

Global spread of institutions

Systemic/unified approach with connectivity across the curriculum

Culture of student empowerment and cross-community collaboration

**Development is typically shaped by regional needs or priorities, enabling a more visionary approach**

## Investment by the Chilean Ministry for Finance

**Established in 2014, the Chilean government's National Agency for Innovation and Development (CORFO) launch Engineering 2030.**

Aiming to drive economic growth through technology innovation, the initiative targets Chilean engineering schools as an incubator for this talent. Over \$200m (US) has already been invested, most of which is focused on educational reform.

**2030 ENGINEERING STRATEGY**

## Case study – PUC (Chile)

## Hallmarks of future leaders:

Experiential, open-ended problem solving rooted in authentic challenges

Fostering skills and mindsets, such as critical thinking and team-working

The roles, responsibilities and ethics of engineers in society

Multi-disciplinary and global learning experience

Student choice, flexibility and work-based learning

## March 2018:

study captured sector-wide views on the direction of travel for engineering education

## March 2020:

almost all universities worldwide pivoted online to emergency teaching due to COVID-19

**How will the systemic shock of COVID-19 impact the direction of travel for the engineering education sector?**

# Outline of presentation

- 1 Context: what was the state of the art in engineering education prior to March 2020?
  - 2 How will the systemic shock of COVID-19 impact the direction of travel for the engineering education sector?**
-

# **Crisis and catalyst:** the impact of COVID-19 on global practice in engineering education

Sponsored by university consortium

Informed by one-to-one interviews with 226  
individuals from 36 countries

# **Crisis and catalyst:** the impact of COVID-19 on global practice in engineering education

- Experiences of the engineering education community during ‘emergency teaching’
- The impact of ‘emergency teaching’ on global practices in engineering education

## Major challenges faced during emergency teaching

- › **Inequality of digital access:** the quality of the institutional IT infrastructure and the capacity of students to access IT devices and reliable internet
- › **Student mental wellbeing and isolation:** challenges in three areas:
  1. Understanding course expectations and managing workload
  2. Building trusting, supportive and collegial relationships with peers
  3. Fostering student motivation and combatting anxiety
- › **Faculty exhaustion and wellbeing:** the toll taken on instructors and university leaders from prolonged uncertainty and exhaustion during the months and years of emergency teaching

## Emerging practices and cultures

- › **Engagement with active learning:** beyond the 'usual suspects'
- › **Remote hands-on learning:** (i) modelling, simulation, or remote activities; (ii) at home hands-on activities; and (iii) replacement activities
- › **Assessment practices:** that balances academic integrity with student wellbeing
- › **External connectivity:** new connections with with external stakeholders, as well as regional/global peers
- › **Attitudes to teaching and learning:** including education experts and team teaching
- › **Faculty-student connectivity:** by forming closer, less hierarchical relationships

# How will best practices in engineering education change in the future?

## Two particular effects of COVID-19 and emergency teaching on cutting-edge programmes:

- A. accelerated and enhanced some of the innovations already in train
- B. precipitated new practices and priorities that may not previously have emerged but for the 'systemic shock' of COVID-19

## Hallmarks of future leaders:

Experiential, open-ended problem solving rooted in authentic challenges

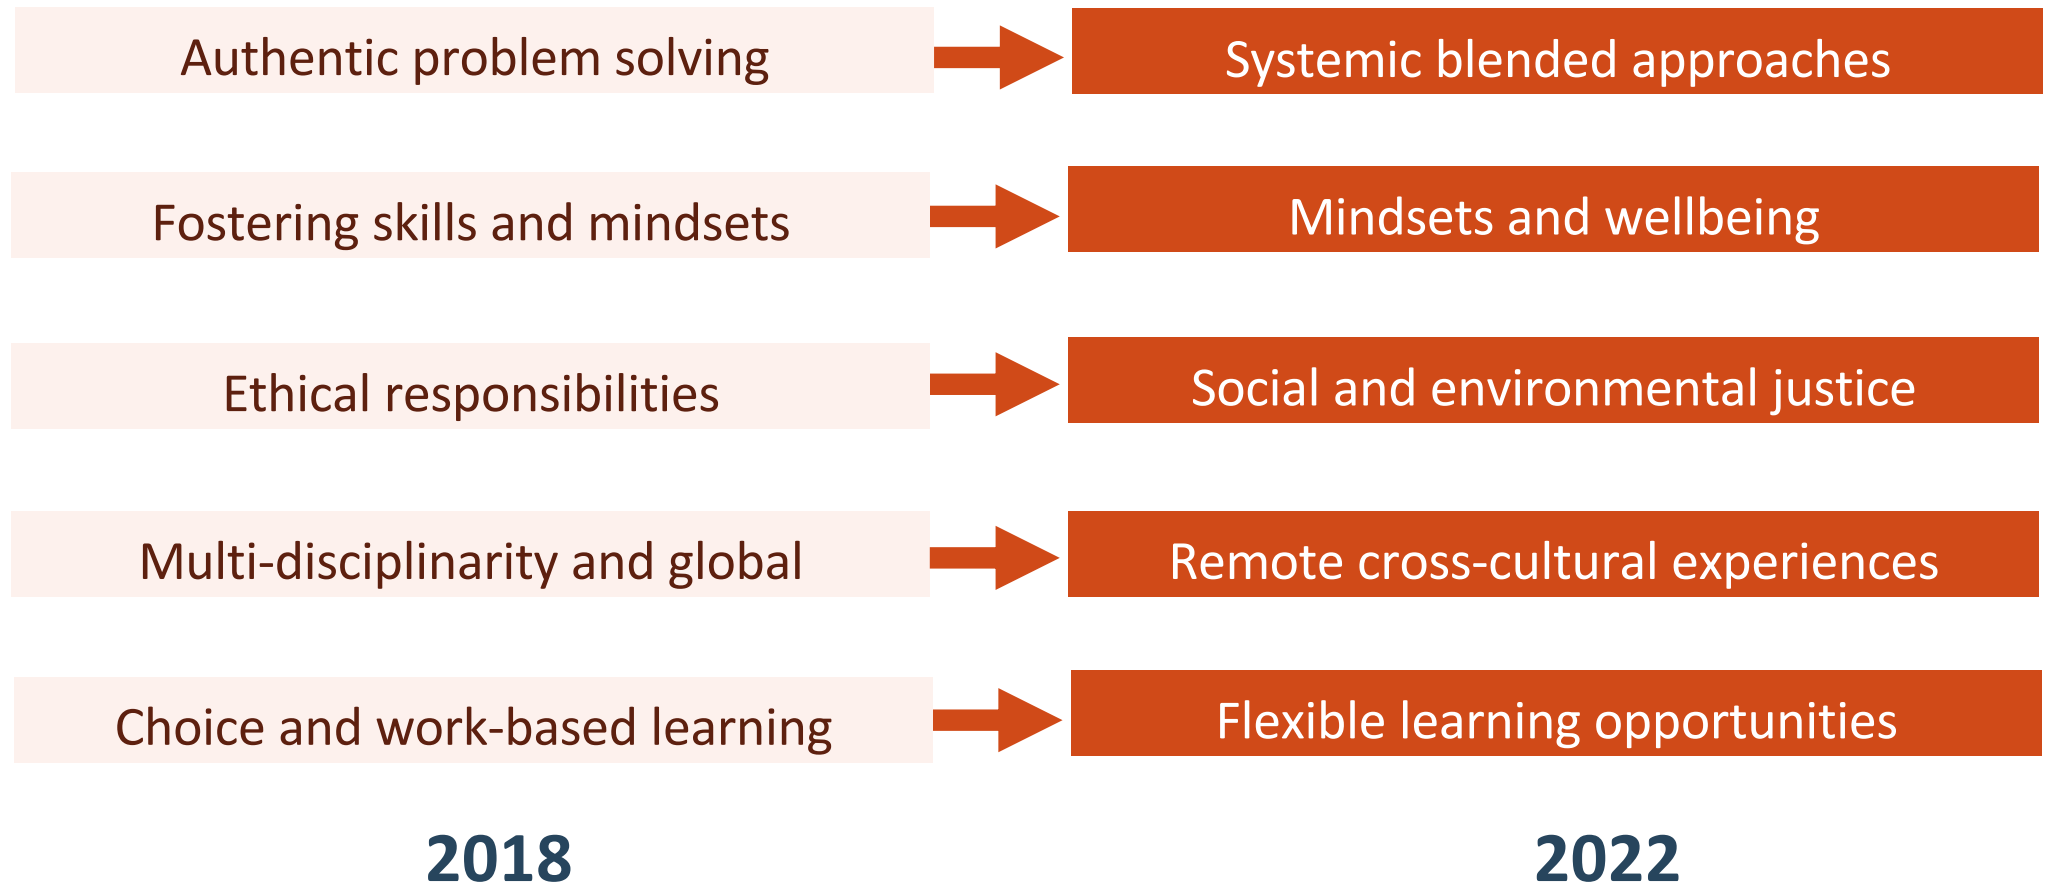

Fostering skills and mindsets, such as critical thinking and team-working

The roles, responsibilities and ethics of engineers in society

Multi-disciplinary and global learning experience

Student choice, flexibility and work-based learning

## A. Acceleration and enhancement of trends already in train

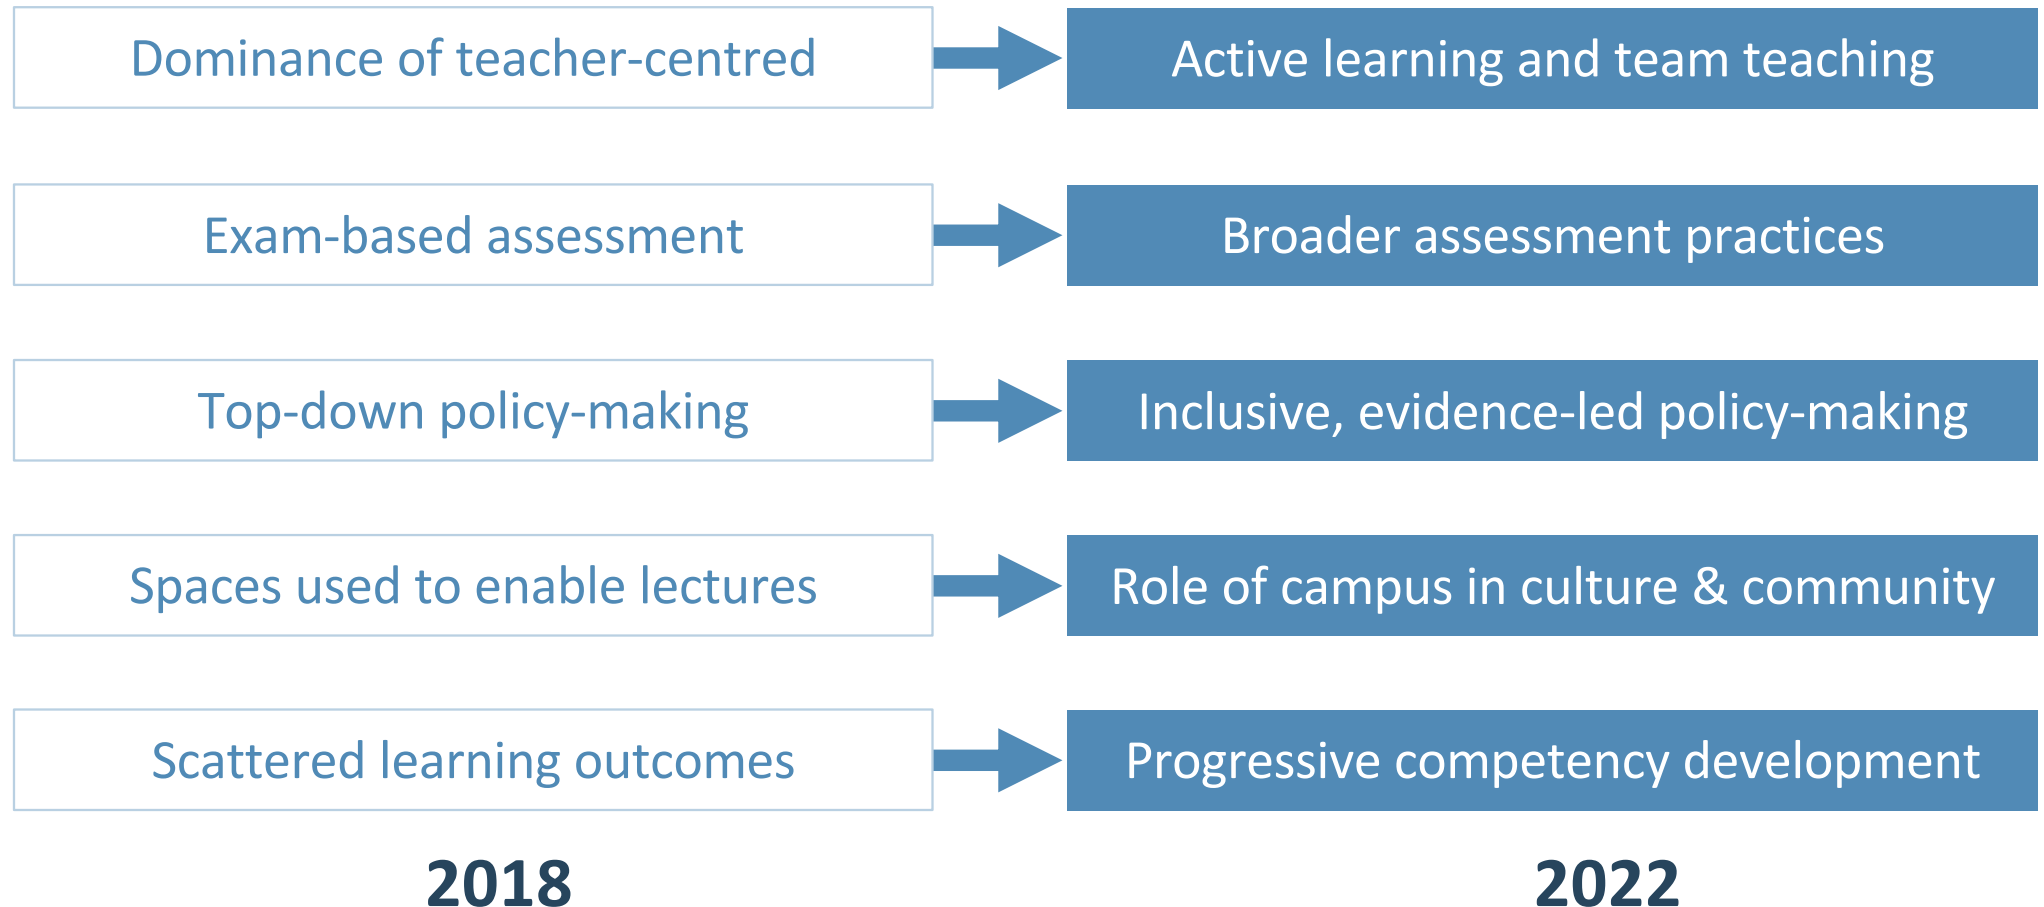

## Two particular effects of COVID-19 and emergency teaching on cutting-edge programmes:

A. accelerated and enhanced some of the innovations already in train

B. precipitated new practices and priorities that may not previously have emerged but for the 'systemic shock' of COVID-19

## 2. New practices and priorities enabled by systemic shock

**What does this look like in practice?**

## Example – Aalborg University (Denmark)

Aalborg University (Denmark)

## Example – Aalborg University (Denmark)

Inclusive, evidence-led policy-making

- › Establishment of the *Institute for Advanced Study in PBL* in early 2022

Systemic blended approaches

- › Wider adoption of blended learning with more ‘taught courses’ delivered online

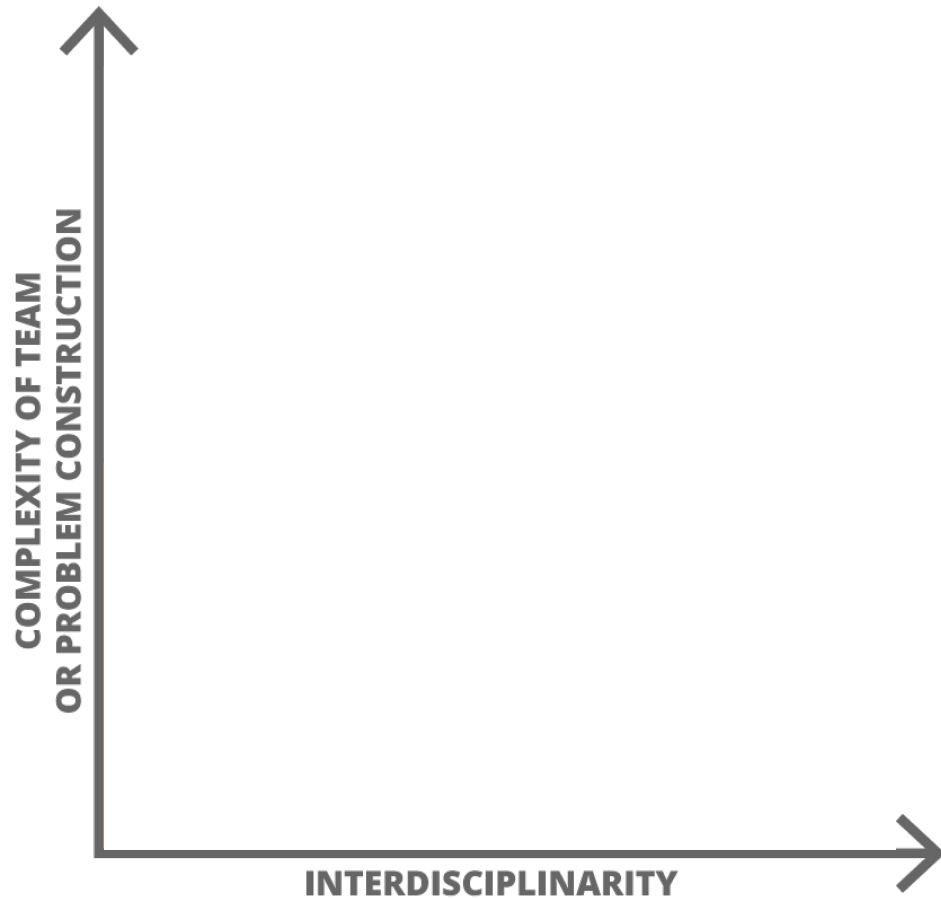

Progressive competency development

- › PBL Competencies built progressively along with workshops & portfolios

Mindsets and wellbeing

- › Focus on mindset development, such as conflict resolution or critical thinking

## Example – Aalborg University (Denmark)

## Example – Aalborg University (Denmark)

### Mega-projects

Building in complexity – technical, societal and inter-disciplinary – as students progress.

Nurturing flexibility, problem-solving and collaborative thinking.

### PBL competencies

Nurturing and tracking progressive learning outcomes.

## Example – Tec de Monterrey (Mexico)

## Example – Tec de Monterrey (Mexico)

Inclusive, evidence-led policy-making

- › Establishment of the *Institute for the Future of Education* in early 2021

Systemic blended approaches

- › Tec 21 curriculum, combining in-person projects with online technical courses

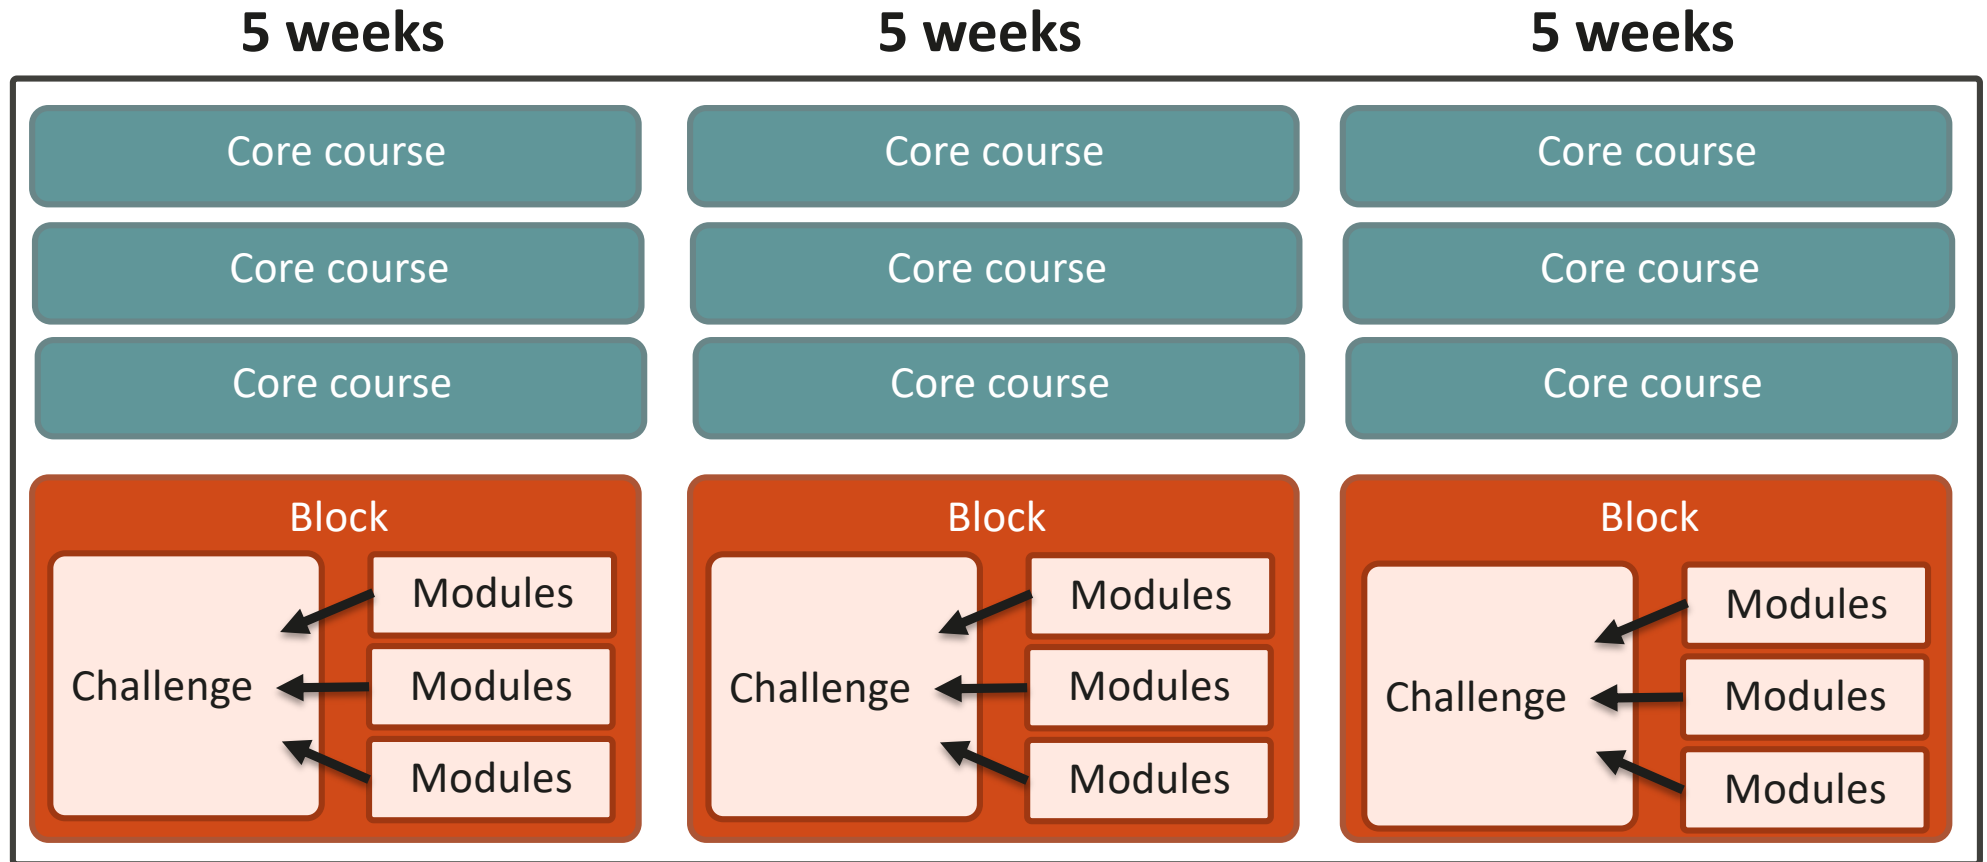

Flexible learning opportunities

- › Choice embedded throughout Tec21 curriculum

Progressive competency development

- › Tec21 embeds 'core competencies' into each semester of study

## Sample semester of the Tec21 curriculum:

## Example – Tec de Monterrey (Mexico)

Inclusive, evidence-led policy-making

- › Establishment of the *Institute for the Future of Education* in early 2021

Systemic blended approaches

- › Tec 21 curriculum, combining in-person projects with online technical courses

Flexible learning opportunities

- › Choice embedded throughout Tec21 curriculum

Progressive competency development

- › Tec21 embeds 'core competencies' into each semester of study

## Concerns and risks facing the sector

- › **Institutional inflexibility:** that inflexibility will stifle innovation at some institutions
- › **Exacerbation of inequalities:** that inequalities amongst students and instructors, and across institutions, may be exacerbated by COVID-19 and ET.
- › **Prioritisation of profit over learning:** that emergency teaching may promote a low-cost passive form of online learning that does not prioritise student learning and development
- › **Risk of defaulting to the ‘status quo’:** that lessons will not have been learnt from emergency teaching

# CEEDA: Collaborative engineering learning in the digital age

[www.ceeda.org](http://www.ceeda.org)

The screenshot displays the CEEDA website interface. At the top left is the CEEDA logo (four overlapping circles in green, blue, purple, and orange) with the text 'Collaborative Engineering Education in the Digital Age'. To the right are navigation links for 'Home', 'Case studies', and 'About'. The main content is divided into two columns. The left column features a section titled 'What is CEEDA?' with a paragraph explaining the website's purpose and a graphic of three overlapping circles containing images of students working. The right column is titled 'Latest CEEDA case studies' and contains two case study cards. The first card is for MIT, USA, with an approval date of April 2021. It includes a 'Part A. Best Practice Activity' section titled 'Design Challenge One' and a 'Part B. Institutional Context' section titled 'Lessons learnt from emergency teaching'. The second card is for Aalborg University, Denmark, with an approval date of March 2021. It includes a 'Part A. Best Practice Activity' section titled 'Giraf Project' and a 'Part B. Institutional Context' section titled 'Lessons learnt from emergency teaching'. Each card has a 'Read' button for both parts.

**What is CEEDA?**

The Collaborative Engineering Education in the Digital Age website showcases examples of global best practice in collaborative and/or project-based engineering learning that are partially or wholly delivered online. It forms one element of a wider study looking at the lessons learnt from the current period of 'emergency teaching' and how this might impact the trajectory of engineering education in the future.

**Latest CEEDA case studies**

**MIT, USA** APPROVAL DATE: April 2021

**Part A. Best Practice Activity**  
Design Challenge One

Design Challenge One builds peer-learning and connectivity amongst students that have not met before face-to-face.

Read **Best Practice Activity**

**Part B. Institutional Context**  
Lessons learnt from emergency teaching

Hands-on, experiential learning has been a major priority at MIT during the period of emergency teaching.

Read **Institutional Context**

**Aalborg University, Denmark** APPROVAL DATE: March 2021

**Part A. Best Practice Activity**  
Giraf Project

The full cohort of 60 students must self-organise and work together to develop an app for autistic children.

Read **Best Practice Activity**

**Part B. Institutional Context**  
Lessons learnt from emergency teaching

A major focus is to progressively expose students to projects of increasing complexity and interdisciplinarity.

Read **Institutional Context**

Thank you
